In the Claims:

A listing of the entire set of pending claims (including amendments to the claims, if any) is submitted herewith per 37 CFR 1.121. This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

1. (Currently Amended) Data processing system comprising:

-        a clustered Instruction Level Parallelism processor, comprising a plurality of clusters each comprising at least one register file and at least one functional unit;

-        an instruction unit for issuing control signals to said clusters,

wherein said instruction unit is connected to each of said clusters via respective control connections ~~each control connection having a pipeline register~~,

        one or more pipeline register between said clusters, depending on the distance between respective ones of said plurality of clusters, and

        one or more additional pipeline registers arranged in said control connections to a remote cluster of said plurality of clusters, depending on the distance between said instruction unit and said plurality of clusters, so as to pipeline said control connections to said remote cluster.

2. (Previously Presented) Data processing system according to claim 1, wherein said clusters are connected to each other via a point-to-point connection.

3. (Previously Presented) Data processing system according to claim 1, wherein said clusters are connected to each other via a bus connection.

4. (Previously Presented) Data processing system according to claim 3, wherein said control connections are implemented as a bus.

Attorney Docket No. NL 030344

5. (Currently Amended) A clustered Instruction Level Parallelism processor, comprising:

- a plurality of clusters each comprising at least one register file and at least one functional unit;

- an instruction unit for issuing control signals to said clusters,

wherein said instruction unit is connected to each of said clusters via respective control connections ~~each control connection having a pipeline register~~,

one or more pipeline register between said clusters, depending on the distance between respective ones of said plurality of clusters, and

one or more **additional** pipeline ~~additional~~ registers arranged in said control connections to a remote cluster of said plurality of clusters, depending on the distance between said instruction unit and said plurality of clusters, so as to pipeline said control connections to said remote cluster.

6. (Previously Presented) The clustered Instruction Level Parallelism processor as claimed in claim 5, wherein said clusters are connected to each other via a point-to-point connection.

7. (Previously Presented) The clustered Instruction Level Parallelism processor as claimed in claim 5, wherein said clusters are connected to each other via a bus connection.

8. (Previously Presented) The clustered Instruction Level Parallelism processor as claimed in claim 7, wherein said control connections are implemented as a bus.

Attorney Docket No. NL 030344
